Stroudsburg, PA 18360

Dear Guy:

Thank you for helping us install an EBU in our new shop at V-Force Customs. We have two separate electricity services in our building, one for the office and another for the shop where we build the motorcycles. The office has several computers and other office equipment. The manufacturing shop includes a CNC mill, a flow-jet, welding machines, and a lot of other machines. Imagine our surprise when the electric bills came a few weeks ago – the bill for the office was \$220.72, while the bill for the shop was \$60.12. The electric bill for the shop was less than the bill for the office!

The EBU has provided another savings. Our new shop does not have a heavy enough electric service. For a while we thought we would not be able to run both the CNC mill and the other equipment at the same time. The EBU helped us solve this problem. Because of the reduced consumption, we can run all of our equipment at the same time. We did not have to spend thousands of dollars on an entirely new service into the building.

You are also well aware of how the EBU saved us from a lightning strike at our old location. When an electricity surge came through the line, the EBU protected our equipment. There was no damage and no downtime.

We are very happy with the performance we are seeing from our Energy Bank Unit.

Sincerely,

Vincent DiMartino
